Partner Network

Evari GIS Consulting Incorporated (Evari) has been in business since June 2009 and was founded with the purpose of providing high-quality GIS services on municipal work. Through a clear understanding of project specific requirements and industry-standard best-practices, Evari focuses on aligning a projects business needs with effective implementation of GIS. Evari provides custom systems, services and products which gives our clients straightforward and intuitive ways to interact and visualize geographic data. This brings insight and value to key decisions and streamlines communication. Evari leverages the Esri Technology Stack (ArcGIS) and the Amazon Web Services Cloud Computing platform for a broad range of municipal GIS applications including planning, traffic, street lighting, energy, infrastructure, utilities, AEC and asset management projects.

Evari GIS specializes in **three primary technical proficiencies** including:

- ☛ high-quality **Cartographic Document Production** and GIS Data Creation/Management used for presentations, reports, wall maps, and to complement expert witness testimony. Evari works closely with environmental planners, biologists, surveyors and other professionals which require professional static map creation services
- ☛ end-to-end **Enterprise GIS solutions**. Evari staff is highly capable at systems architecture, database design, web and mobile development, implementation, management and administration, as well as integration with other complementary systems. An enterprise GIS allows our clients to view and edit GIS data through easy to use web and mobile applications. These systems help clients leverage geography to streamline their workflow.
- ☛ support for **energy conservation projects**. Evari staff is adept at leveraging GIS to identify energy/cost savings by mapping utility infrastructure in order to inform decisions about construction workflows, streamline acquisition of rebates and manage the progress of energy projects. GIS is used to distinguish between metered and non-metered appliances, assemble energy infrastructure data, investment grade energy audits to map appliances, calculating energy savings, benchmarking and energy savings analysis.
